## 1. Introduction

In recent years, environmental impacts to lake shorelines (e.g., degraded habitat, recreational use conflicts, and water quality impacts) have prompted government agencies to initiate projects focused on increasing our understanding of lake shorelines to support evidence-based lake management strategies. For example, Living Lakes Canada has partnered with local, provincial and federal regulators to provide guidance on how to balance shoreline development with protection of important habitats. The guidelines presented in this document are founded on the concept that sustainable management is the shared responsibility of all stakeholders, including proponents, professionals and all levels of government.

This Foreshore Development Guide (FDG) provides development planning guidelines, aimed at protecting sensitive fish and wildlife species and their habitats identified through the previous FIM and FHSI analyses. The FDG is an initial tool used when planning for, prescribing, or reviewing riparian and shoreline alterations. Based on the environmental (species and habitat) values, the FDG identifies the levels of risk associated with shoreline alteration from various types of development activities. The risks identify the anticipated regulatory steps required to proceed with the project. The guidelines provide important information to support both the landowner in preparing foreshore work applications, and the government agencies during their review of the applications.

The FDG recommends areas to be conserved, where development may present very high or significant risk to high value species and their habitats that require shoreline areas to carry out their life-cycle. These sensitive habitats may be protected by various means, including local government inclusion in local planning processes such as Official Community Plans (OCP) and bylaws. Additionally, the FDG describes how restoration opportunities should be sought to improve habitat previously disturbed, and to potentially aid in obtaining regulatory support for new proposed projects.

The FDG methods were first developed for Windermere Lake by the East Kootenay Integrated Lake Management Partnership (EKILMP et al. 2009). These original methods used the BC Ministry of Environment (BC MoE) document - High Value Habitat Maps and Associated Protocol for Works along the Foreshore of Large Lakes within the Okanagan (BC MoE 2008), and input from the various EKILMP members including: Fisheries and Oceans Canada (DFO), BC MoE, Regional District of East Kootenay (RDEK) and Wildsight. Additional lake projects followed and expanded on the initial EKILMP FDG. Notable lake projects included: Moyie Lake (Schleppe 2009), Tie Lake (McPherson et al. 2012) and Kootenay Lake (Kootenay Lake Partnership 2019). With each iteration of these documents, the general process for developing a FDG were refined.

## 2. Important Contact Information

Proponents may use the contact information provided below when planning their proposed activities. Even with the use of this document, it is recommended that anyone who is planning work on Crown Land (such as the shoreline), first contact FrontCounterBC or retain the services of a Qualified Environmental Professional (QEP) who will contact FrontCounterBC on their behalf. Depending on the situation, FrontCounterBC will provide guidance on whether the proposed works are allowed or not allowed under the respective legislation. Similarly, works on private lands must also consider local government's requirements (e.g., permitting or notifications).

**FrontCounterBC** - *FrontCounterBC* should be contacted for any works planned on Crown Land, including work along the lake shoreline.

**Phone:** 1-877-855-3222

**Email:** [FrontCounterBC@gov.bc.ca](mailto:FrontCounterBC@gov.bc.ca)

**Regional District** – Regional District of Central Kootenay should be contacted for any works planned on private land within the region's jurisdiction.

**Phone:** 250-352-6665 (Nelson)

**Email:** [info@rdck.bc.ca](mailto:info@rdck.bc.ca)

**Local Municipality** – The following should be contacted for any works planned on private land within the village's jurisdiction.

**Village of Slocan**

**Phone:** 250-355-2277

**Email:** [info@villageofslocan.ca](mailto:info@villageofslocan.ca)

**Village of Silverton**

**Phone:** 250-358-2472

**Email:** [administration@silverton.ca](mailto:administration@silverton.ca)

**Village of New Denver**

**Phone:** 250-358-2316

**Email:** [office@newdenver.ca](mailto:office@newdenver.ca)

**First Nations** – The following should be contacted for any works that require First Nation engagement.

**Syilx Okanagan Nation Alliance**

**Phone:** 250-707-0095

**Website:** <https://www.syilx.org/>

**Sinixt Nation**

## 2.1. First Nations Traditional Ecological Knowledge (TEK)

The Slocan Lake FIMP program was developed to include the direct involvement of the Okanagan Nation Alliance (ONA) and Syilx Natural Resources during all aspects of the FIM field survey as well as in the review of FHSI criteria and the FIMP documents. Syilx Natural

Resources and ONA compiled background and generational Syilx knowledge with observations during the September 2021 field survey to produce a report that includes value considerations, areas of concern, and recommendations for the long-term protection of important habitats and cultural values. Mapping products included in the report include polygons of medium to high and high potential archaeological areas as well as point locations of important cultural sites observed during the survey including pictographs and culturally modified trees. This report is included within an appendix of the Slocan Lake FIMP. ONA also conducted a desktop cultural review of the Slocan Lake watershed and information obtained during the review is provided in the body of the Slocan Lake FIMP report.

### 3. FDG Process Overview

The FDG provides a step-wise process to help direct applicants through the initial planning stages for their proposed shoreline development, project or activity (Figure 1).

**Step 1:** Identify the fish and wildlife habitat values where the project is situated using the FDG map. The FDG map was prepared using the FHSI outputs, and depicts: a) values by segment, with different colours representing high to low values; and b) where Zones of Sensitivity (ZOS) may be present. ZOS are areas with exceptionally high value, which should if at all possible, be conserved according to local, provincial or federal plans or through private land agreements.

**Step 2:** Review the general recommendations for the applicable colour zone and ZOS to understand associated habitat sensitivity of the area, and risk anthropogenic disturbances pose.

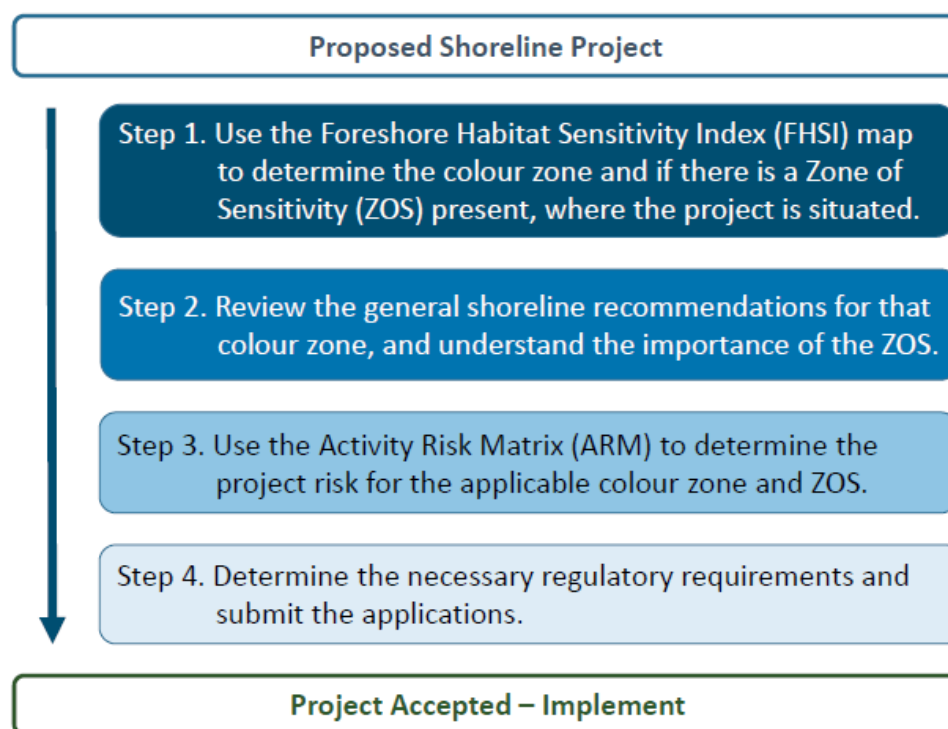

**Step 3:** Use the Activity Risk Matrix (ARM) to identify the level of risk of the proposed project on the habitat. The risk is indicative of the acceptability of a project to regulators.

**Step 4:** Determine the necessary regulatory approvals/permits/authorizations (collectively 'approvals') that must be obtained. This final step is project dependent and depends on many factors and is subject to change based on government policy. Hence, only an overview is provided here, along with logistical considerations.

---

*For areas of greater risk, a very high level of detail is needed in order to submit an application that can be considered for regulatory review. In these cases, it should not be expected that because information is submitted that approvals are forthcoming.*

---

**Figure 1. Four steps when planning to develop or modify foreshore habitat.**

### 3.1. Interpret the FDG Map

The key results of the FIM and FHSI are presented in tables and maps in Wood (2022). When planning foreshore development, the FDG map is the primary reference tool because it synthesizes the pertinent fish and wildlife information into an easy to understand map (Appendix A). In the FDG map, the FHSI ecological rankings for each segment are depicted as one of five colours zones, ranging from very high to very low value (Table 1).

**Table 1. FHSI ecological rank and ZOS colour scheme applied to the FDG map.**

Value type	Rank/Sensitivity	Map Colour
Ecological Rank	Very High	Red
	High	Orange
	Moderate	Yellow
	Low & Very Low	Grey
	Fisheries	Blue

Zones of Sensitivity	Wildlife	Brown
	Herptiles	Mauve
	Waterfowl	Teal
	Ecosystem/Habitat Feature	Green
	Rare occurrences	Purple
	Vegetation	Olive

The FDG map also depicts each ZOS in a specific colour scheme. Each ZOS is presented as either a polygon, line, or point, and should include an outer buffer. This buffer accounts for unknowns of the ZOS full extent, and protects the core ZOS from potential impacts from adjacent activities (Figure 2). Details on each ZOS, including how each was defined, and how the buffers were determined are presented in Section 5.2.

**Figure 2. Zone of Sensitivity with an appropriate buffer.**

#### **4. Step 1. Locate Project Relative to Shoreline Colour Zones and Zones of Sensitivity**

Use the FDG map to identify the values present along or within their proposed development area. Together, the FHSI colour zone and the ZOS mapped features provide a science-based tool to guide development planning. The fish and wildlife value/risk and subsequent regulatory review process are highest in red zones and areas with ZOS. Since these areas have the highest natural value and are at greatest risk to shoreline alteration, they require the highest level of on-going protection. The values/risk in the grey zones are lowest. Since there is already likely significant impact from development in grey zones, future development is less likely to cause negative impacts. The specific recommendations for each colour zone and ZOS are provided in the next section.

**5. Step 2 – Review Colour Zone, ZOS and Conservation Recommendations**

For this step, review the recommendations for the respective colour zone and ZOS that aligns with the proposed development. The summary tables below provide detail on the values present, and identify how to potentially minimize impacts. Also, refer to the conservation recommendations to see how your project may align with an area that has been identified as a candidate for protection. Proposed development should adhere to these recommendations to reduce impacts on sensitive fish and wildlife values. Opportunities for restoration or re-development should be explored in any zone where work is proposed.

### 5.1. Shoreline Colour Zone Recommendations

Red Shoreline	
<b>Defined by:</b>	Very High FHSI ecological rank.
<b>FHSI summary:</b>	Red zones account for 3.1% of the total shoreline length of Slocan Lake.
<b>Sensitivity Summary:</b>	Red shoreline areas have been identified as essential for the long term maintenance of fish and/or wildlife values through the FHSI Analysis. These areas are essential for fish and/or wildlife populations. These shoreline areas are stream confluences in natural condition with no/very little shoreline disturbance observed. These shoreline areas also provide important juvenile rearing, migration and staging habitat for fish, wildlife connectivity corridors and habitat for SARA-listed terrestrial species. Shoreline disturbance is increasing at a rate of approximately 0.01% of the Slocan Lake shoreline per year and it is important to identify and protect sensitive areas from development pressure.
<b>Recommendations:</b>	Due to their high value (sensitive communities present), Red shoreline areas are recommended to have limited development to promote conservation use (Section 5.3). Low impact water access recreation and traditional First Nation uses are examples of acceptable activities in these areas, while permanent structures or alteration of habitats are not. Invasive aquatic plant removal is often acceptable, provided there is an approved aquatic plant removal program, including trained personnel, and appropriate permitting in place. Habitat restoration may be appropriate in these areas, where applicable.

Orange Shoreline	
<b>Defined by:</b>	High FHSI ecological rank.
<b>FHSI summary:</b>	Orange zones account for 62% of the total shoreline length of Slocan Lake.
<b>Sensitivity Summary:</b>	Orange shoreline segments have been identified as high value habitat areas for fish and/or wildlife. These areas are comprised of relatively natural undisturbed habitats that provide important fish and wildlife migration corridors and often have intact riparian areas and other high value shoreline habitat features. These areas are sensitive to development, continue to provide important habitat functions, but may be at risk from adjacent development pressures. Shoreline disturbance is

### Orange Shoreline

increasing at a rate of approximately 0.01% of the Slocan Lake shoreline per year and it is important to identify and protect sensitive areas from development pressure.

**Recommendations:**

Proponents should consider moving high risk activities to other areas if possible, or pursuing activities that have lower associated risks. The lake environment can benefit from having orange shoreline areas set aside to contribute to the overall lake conservation area. The conservation options identified in Section 5.3 would likely apply through most of the orange areas, benefitting the lake. Restoration opportunities potentially exist in these areas.

### Yellow Shoreline

**Defined by:** Moderate FHSI ecological rank.

**Lake summary:** Yellow zones account for 34.3% of the total shoreline length of Slocan Lake.

**Sensitivity summary:** These areas have experienced a moderate amount of development disturbance and pressure or have shoreline characteristics that provide limited habitat for fish and wildlife. Foreshore modifications associated with residential development including docks, groynes, retaining walls, boat launches and mooring buoys are observed in some segments with Moderate FHSI ecological rank. Others have steep cliff/bluff shorelines with very narrow littoral zones. Although some of these areas have been impacted to some degree, they still are largely intact and their habitat values remain important. Shoreline disturbance is increasing at a rate of approximately 0.01% of the Slocan Lake shoreline per year and it is important to identify and protect sensitive areas from development pressure.

**Recommendations:** Development along Yellow shoreline areas would likely result in less of an impact, than along Red or Orange areas. However, activities should incorporate protection of habitat features that remain, be well above the high water mark, and and/or be situated outside of the riparian area. Restoration may be an option in some areas that have experienced past developments. Development may proceed for low risk activities provided a Best Management Practice (BMP) or Regional Operating Statement (ROS) is available and followed (Appendix B). High risk activities without a BMP or ROS will require an environmental assessment from a QEP. Local Official Community Plans (e.g., RDCK Electoral Area 'H' – Slocan

### Yellow Shoreline

Lake North OCP) also provide direction and bylaws for development adjacent to the foreshore.

### Grey Shoreline

**Defined by:** Low and Very Low FHSI Ecological Rank.

**Lake summary:** Grey zones account for 2.0% of the total shoreline length of Slocan Lake.

**Sensitivity summary:** Grey shorelines have a lower ecological ranking. Shorelines have been heavily disturbed by residential development and historic transportation uses. However, they still may contain valuable habitats requiring some protection, such as aquatic or riparian vegetation. Their importance as corridors to neighboring high value areas should also be considered during development. Shoreline disturbance is increasing at a rate of approximately 0.01% of the Slocan Lake shoreline per year and it is important to identify and protect sensitive areas from development pressure.

**Recommendations:** Human development has been concentrated in these areas and has resulted in disturbances to the natural fish and wildlife habitat. Important habitats do exist in degraded and developed areas, and at least minimal standards are required to protect fish and wildlife habitat in the grey zone areas. In keeping with the objective of concentrating development in areas that are already disturbed or of low value, new developments may be considered in these areas. Re-development will also be considered. Proposals should incorporate fish and wildlife habitat restoration or improvement features, where feasible and practicable. For example, a retaining wall redevelopment may be moved back from the HWM and/or incorporate re-vegetation or other fish and wildlife features in the design. Obtain advice from a QEP for habitat restoration techniques.

## 5.2. Zones of Sensitivity Recommendations

A total of two types of ZOS were identified through the FHSI analysis. The ZOS with their corresponding buffers are identified on the FDG map. For this step, use the map and identify if the proposed development aligns with any of the mapped ZOS (use outer edge of buffer). Then refer to the corresponding ZOS summary table(s) below for general information on the values present and recommendations to reduce impacts.

### Fisheries – Tributary Mouth

**Lake summary:** Tributary mouth ZOS are located at the confluence of Slocan Lake and inflow and outflow tributaries. Tributary mouth areas were mapped as polygons that capture the confluence of the two waterbodies and include both shallow areas used for migration and deeper areas used for staging. This was done by outlining a 50 m radius semicircle polygon at the confluence of each tributary identified in the BC Freshwater Atlas and Slocan Lake. A 20 m buffer was applied to the ZOS around its perimeter. Note that other tributary mouth locations, though not identified as ZOS at this time, may still provide important fish habitat and tributary mouths identified as ZOS can be updated if additional information becomes available.

**Sensitivity summary:** Tributary mouths provide important habitat for fish rearing, migration and staging. Tributaries to Slocan Lake provide spawning, egg incubation and juvenile rearing habitat for salmonids and can also provide a cool water refuge during summer when there are periods of higher water temperatures. Tributaries may also provide habitat for SARA-listed species like Shorthead Sculpin which were documented at the Springer Creek outlet and Slocan River inlet. In addition to fisheries values, water quality parameters such as temperature, dissolved oxygen, turbidity and nutrients of tributary inflows play an important role in the overall water quality of lake ecosystems.

**Recommendations:** These sensitive habitats are to be protected, with no permanent developments recommended both within and adjacent to the mapped polygon areas. A buffer of 20 m is recommended.

### Vegetation – Aquatic Vegetation

**Lake summary:** Submergent aquatic vegetation on Slocan Lake was mapped during the 2021 re-FIM and was observed along 9% of the foreshore. Note that wetlands were not included as a ZOS at this time because wetlands were not observed within the high-water mark of Slocan Lake. This also highlights the important role aquatic vegetation plays in the lake in the absence of wetlands. Snk'mip Marsh, a wetland in the riparian area at the north end of the lake, is protected by a conservation covenant.

**Sensitivity summary:** Aquatic vegetation contributes to the overall health of an ecosystem by providing an important source of nutrients, oxygenation and habitat for aquatic, terrestrial and avian species. Aquatic vegetation is an important component of wetlands, which provide habitat, flood control, water filtration and food resources.

**Vegetation – Aquatic Vegetation**

**Recommendations:** These sensitive habitats are to be protected, with no permanent developments recommended both within and adjacent to the mapped polygon areas. A buffer of 20 m is recommended.

**5.3. Shoreline Conservation Recommendations**

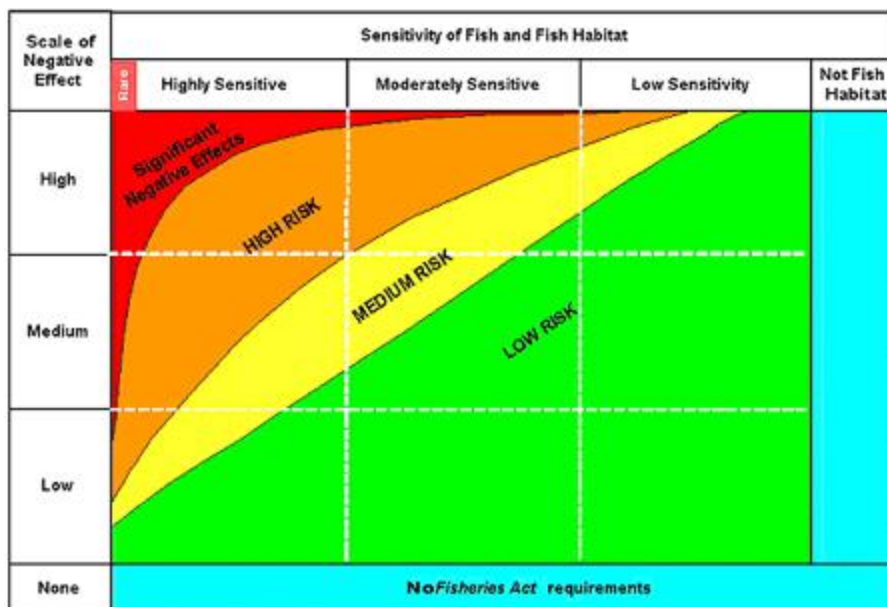

It is recommended that the following very high and high ecological value locations identified during the Slocan Lake FIMP be considered for designation as conservation zones:

- Bonanza Creek confluence.
- Shannon Creek confluence.
- Wragge Creek confluence.
- Wilson Creek confluence.
- Carpenter Creek confluence.
- Silverton Creek confluence.
- Springer Creek confluence.
- Slocan River outlet. And,
- Shoreline adjacent to Wragge Beach Forest Recreation area.

Protection of these areas could include: a) establishment of protected areas (potentially through any level of government); b) Section 16 Land Act Reserves; c) regional or municipal official community plans (OCPs) which designate these areas as development permit areas of limited development potential (e.g., not within an urban growth boundary as an example); or, d) through private land conservation agreements, such as tenure covenants or direct land sales to land conservancy organizations such as the Land Conservancy of Canada. Current OCPs such as the Village of Slocan OCP, Village of New Denver OCP and the Regional District of Central Kootenay Electoral Area 'H' – Slocan Lake North OCP can be updated to include the results of the 2021 Slocan Lake FIMP and FDG to identify shoreline areas with Very High (Red) and High (Orange) ecological ranks as well as ZOS as sensitive habitats, for example, by designating them as Development Permit Areas with 30 m setback measured from the high-water mark.

**6. Step 3. Refer to the Activity Risk Matrix (ARM) to Determine Project Risk.**

This step involves using the ARM to determine what the predicted level of risk is for your specific proposed activity, given the shoreline colour zone and ZOS present. It is a well understood concept that the potential for negative environmental impacts are deemed greatest in areas where values and risk are highest (Figure 3; DFO 2006). In the ARM, each colour zone and activity combination has been rated as having a risk of either: Very High (VH), High (H), Moderate (M), or Low (L) (Appendix B). These risk ratings reflect the potential impacts on fish and wildlife, with a Very High risk posing the greatest potential concern, and the Low Risk a lower level of concern. The ARM also identifies that if a ZOS is present, the risk also increases.

**Figure 3. How the potential for negative effects relates to sensitivity and risk (DFO 2006).**

### 6.1. Using the ARM

Clarifications for using the ARM are listed below:

1. If your activity is not listed, assume High Risk and contact FrontCounterBC for advice.
2. Where several activities with differing risk rating are proposed for a single Project, the cumulative risk may increase. Consequently, it is recommended to seek the advice of a QEP to determine if the higher of the two risk ratings effectively captures the cumulative risk, or if the highest risk rating should be used [e.g., Very High]).
3. The ARM distinguishes between several activities above and below the present natural boundary (NB). The NB is the legal term BC Crown Land Branch uses to define the Crown Land property boundary along the shoreline. High Water Mark (HWM) is a similar standard term used by DFO when considering impacts to fish values. The NB and HWM are often located in the same location, but this can vary. Only a registered BC Legal Land Surveyor may determine the NB.
4. In some instances, the project may not seem to have a high degree of risk. However, the ARM also accounts for other accompanying impacts likely to occur once the modification is in place. For instance, once a dock is in place, other likely associated impacts are: prop wash, maintenance, and boat traffic.

### 6.2. General Mitigation Hierarchy

The general principles of shoreline development are to design in such a way that there is “No Net Loss” in the quantity or quality of existing habitat. These principles are supported by the

federal and provincial policy<sup>1,2</sup>). In general, these principles are achieved through application of the following mitigation options: (1) avoidance of environmental impacts and associated components; (2) minimization of unavoidable impacts on environmental values and associated components; (3) restore on site environmental values and associated components, and, (4) offset impacts to environmental values of components for residual impacts that cannot be minimized.

### 6.3. Very High and High Risk Activities

Most in-stream works in Red and Orange shoreline zone areas are considered Very High and High Risk activities. All activities in a ZOS are considered Very High Risk. Development in these areas has the potential to cause long-term or irreparable disturbance to the highly sensitive/unique values present. The Very High Risk activities in particular, are known to have significant challenges related to providing adequate mitigation to address the loss of fish and/or wildlife habitat values. For example, the dredging activity is considered Very High Risk in all colour zones, since it results in a major disturbance to the substrate, aquatic vegetation that may be present, and has the potential for direct impacts on aquatic life, and processes (wave climate and sediment transport). There may also be indirect impacts, such as on water quality, if for example the dredge is to support a marina.

If your activity is identified as being Very High or High Risk, determine if you can modify the activity or location to reduce the risk. This may involve moving the project to a colour zone with less sensitive habitat, or selecting a lower risk activity (Figure 4). If reducing the risk is not possible by re-designing or re-locating the project, there is a high likelihood that a detailed environmental assessment would be required to support the project application. In these areas, the high risks may trigger a request for a Harmful Alteration, Disruption or Destruction of Fish Habitat (HADD) authorization under the federal *Fisheries Act*. If residual effects cannot be mitigated, compensation may be required. Acceptable mitigation and compensation measures would likely be very costly to implement. It is highly advised that a QEP be retained to assist with the project planning in all high and very high risk areas. A QEP should be knowledgeable about both the permitting and application process for proposed activities and will be able to provide guidance on potential environmental risks and impacts. A QEP would likely conduct an environmental assessment within the project area, confirm risks, and make recommendations to reduce impacts to aid in the regulatory permitting process. Applications for these types of developments may not be supported by regulators and may not be approved, even if extensive and detailed information is provided as part of a permitting process.

As an example, the type of information that might be required to support an application for a proposed project located in a sensitive area could include, a detailed erosion control plan that might require a BC Legal Land Surveyor to determine the location of NB and property boundaries, a QEP to provide recommendations to mitigate construction works as part of an environmental assessment, or an engineer may be needed to provide a detailed design for submission of permits under regulatory processes.

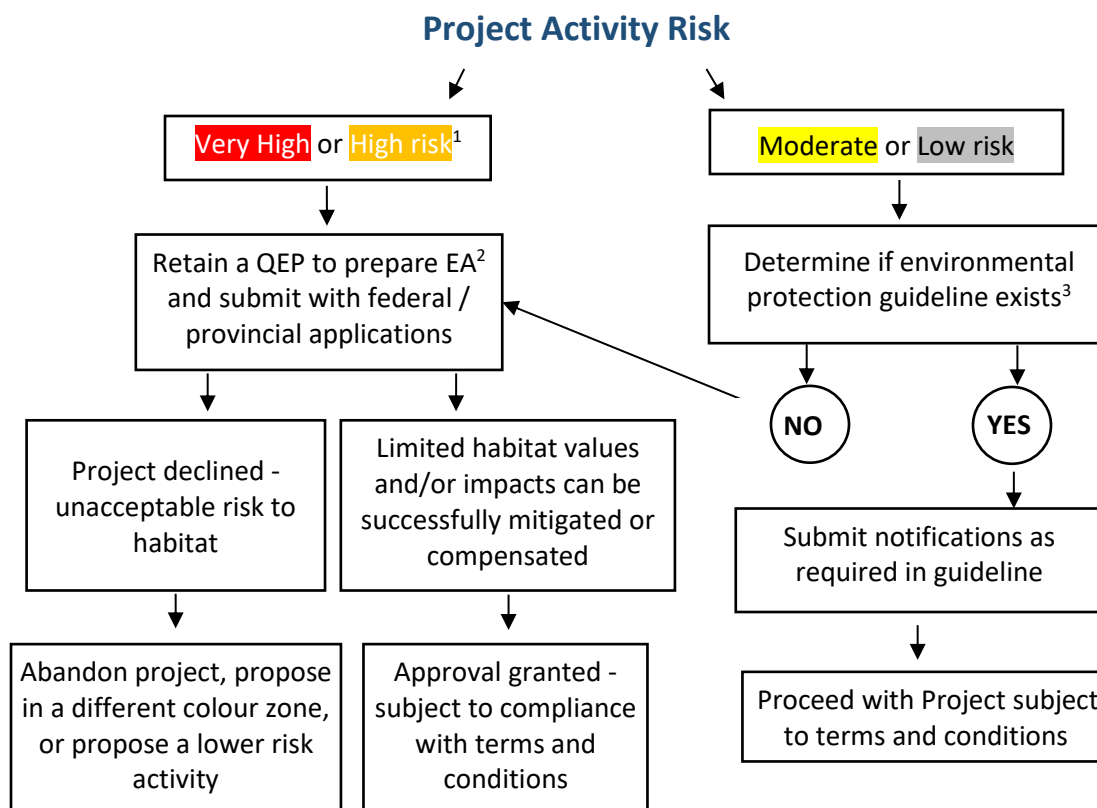

#### Figure 4. Typical Environmental Regulatory Review Decision-Making Process

---

<sup>2</sup> BC Environmental Mitigation Policy website:

<https://www2.gov.bc.ca/gov/content/environment/natural-resource-stewardship/laws-policies-standards-guidance/environmental-guidance-and-policy/environmental-mitigation-policy>.

<sup>1</sup> Very High or High Risk activities have the potential to raise significant concerns. These activities have great challenges related to providing adequate mitigation or compensation to address the loss of fish and/or wildlife habitat values, and could be costly to implement (may require compensation).

<sup>2</sup> Environmental Assessment

<sup>3</sup>BMP – Best Management Practice; ROS –Regional Operating Statement

#### 6.4. Moderate and Low Risk Activities

With appropriate design and planning, Moderate and Low Risk activities could be incorporated along the foreshore with fewer impacts on fish and wildlife habitat values. Where available, these activities should follow applicable Best Management Practices (BMP), Standards and Codes of Practice (collectively BMP; see next section). Where BMPs are not available, or a deviation from the BMP is proposed, a QEP should be retained to complete the application. The application will be reviewed by the applicable agencies.

### 7. Step 4 – Determine Regulatory Requirements and Submit Applications

The final step when planning a foreshore development project is to determine the regulatory requirements necessary for the project to proceed and to submit those applications. Regulatory applications are to be made to the federal, provincial, or local governments for necessary permits, authorizations, notifications, and reviews etc. Essentially any shoreline development will require the preparation of at least one regulatory application. The regulatory application's acceptance will be required for the project to proceed legitimately. Commencing work without approval may be considered unlawful and result in infractions such as trespass. Work that has not been approved may also be subject to enforcement actions by the respective agencies, and may require additional effort to mitigate any undesired

environmental impacts that occurred. Alternatively, the project proponent could be required to remove all infrastructure and restore the area.

Typical regulatory requirements for each activity listed in the ARM are provided in Appendix C. As well, Provincial BMPs have been listed in Appendix D<sup>3</sup>. Although summarized here, the requirements at the time of planning the project will need to be confirmed, as regulatory changes might occur. Also, the DFO website should be reviewed for applicable Standards and Codes of Practice that may help guide planning and development<sup>4</sup>. Contact FrontCounterBC to determine which provincial permits, approvals or authorizations you need, or retain a QEP for guidance.

---

*This document does not provide a full summary of all potential requirements for a particular project. Proponents must ensure that they have adequately considered, consulted, and determined the necessary approvals required for a project to proceed prior to undertaking any works.*

---

### 7.1. Other Considerations to Facilitate Project Approvals

This FDG addresses both existing and proposed works. Sometimes there are concerns with the installation of past structures, which may include, if the structures:

- Resulted in extensive impacts along the shoreline;
- Were installed without appropriate permits or approvals in place; and/or,
- Were not compliant with standard BMPs.

If any of the above concerns are present on the property where work is planned, then follow these steps, so that new applications, or applications for maintenance or expansion on existing projects, can be reviewed more effectively:

1. Determine if the existing works are on private land or Crown Land.
2. Determine if they are located in an Application Only Area/Reserve area established under the *Land Act*.
3. Determine if the works were authorized by the appropriate authority. If yes, skip to step 5.
4. Seek approval from the appropriate authority. Approval may or may not be granted depending on the situation. Previous projects installed without appropriate permits or approvals may be required to be removed as part of an application process.
5. Plan and update existing works to current Best Management Practices.
6. Include other mitigation practices, such as landscape restoration (planting native riparian vegetation), substrate improvement (removing or mitigating existing groynes), and other habitat improvements.

---

Vegetation: 02-01-019\_slocan\_lake\_fdg\_maps.mxd

**Appendix B. Activity Risk Matrix (Risk ratings: NA = Not Allowed, VH = Very High, H = High, M = Moderate, and L = Low)**

Activity <sup>1</sup>	Risk rating based on Ecological Ranking				Risk rating if Zone of Sensitivity Present <sup>2</sup>
	Very High	High	Moderate	Low / Very low	
Aquatic Vegetation Removal					
Removing native aquatic vegetation - by hand, or mechanical cutting for swimming areas and private beach access	VH	VH	VH	VH	NA
Removing non-native/invasive aquatic vegetation - by hand or mechanical cutting for swimming areas and private beach access	VH	VH	H	M	NA
Dredging, Infilling and Beach Creation					
Dredging - new or expansion works, no current tenure	VH	VH	VH	VH	NA
Maintenance dredging - dredged in last 10 years, no increase in footprint below the NB <sup>1</sup> , dredged material deposited on land, within existing tenure	VH	VH	VH	VH	NA
Lake infilling - e.g. extension of upland landscaping	VH	VH	VH	VH	NA
Beach creation below the lake NB	VH	VH	VH	VH	NA
Foreshore sediment disturbance and removal of lakebed substrate (e.g., beach grooming)	VH	VH	H	M	NA
Foreshore Erosion, Sediment or Wave Control Structures					
New groyne construction or increase in existing footprint	VH	VH	VH	VH	NA
Maintenance of existing groyne, no increase in existing footprint, within existing tenure	M	M	L	L	NA
Erosion control (e.g., concrete, rip rap, vegetation, etc.)	VH	VH	H	M	NA
Infill breakwaters or boat basins	VH	VH	H	H	NA
Wave control structures (e.g., log booms)	VH	VH	H	M	NA
Boat Launches					
Construction of new hard surface boat launch or repair/upgrade of existing hard surface boat launch without land tenure	VH	VH	VH	H	NA
Upgrade/repair of existing hard surface boat launch with land tenure and within existing footprint	VH	H	H	M	NA

Activity <sup>1</sup>	Risk rating based on Ecological Ranking				Risk rating if Zone of Sensitivity Present <sup>2</sup>
	Very High	High	Moderate	Low / Very low	
Upgrade/repair of existing hard surface boat launch with land tenure and increasing size of the existing allowable footprint	VH	VH	H	M	NA
Construction of new boat rail launch or repair/upgrade of existing boat rail launch without land tenure	VH	H	M	L	NA
Upgrade/repair of existing boat rail launch with land tenure and within existing footprint	H	H	M	M	NA
Buoys					
Placement of up to 2 helical screw anchor mooring buoys for non-commercial use.	VH	H	M	L	NA
Placement of up to 2 non-helical screw mooring buoys for non-commercial use.	VH	H	H	M	NA
Placement mooring buoys for commercial use	Moorage # dependent - see Marina Activity rankings				NA
Docks, boathouses, pile supported structures, float home structures, and other - below NB					
Docks - floating, pile supported or removable	VH	H	M	L	NA
Floating or lake access boat house, covered boat storage, or permanent non-moorage structures	VH	VH	VH	VH	NA
Land boat house - located on land with access directly to the water	VH	VH	VH	H	NA
Pumphouse	VH	VH	VH	H	NA
Boat lifts	VH	H	L	L	NA
Float homes and house boats - refers to long term storage area.	VH	VH	VH	VH	NA
Float home/ house boats - refers to short term mooring (in bays).	VH	H	M	L	NA
Submarine cables, including related land clearing and equipment access.	VH	VH	VH	H	NA
Submarine cables - no land clearing necessary.	L	L	L	L	NA
Overwater piled structure (e.g. building, deck, etc.)	VH	VH	VH	VH	NA
Elevated boardwalk over water	VH	H	H	H	NA
Marinas					
Private dock moorage = < 6	VH	H	M	M	NA
Small Marina = 6 – 20 slips	VH	H	H	H	NA

Activity <sup>1</sup>	Risk rating based on Ecological Ranking				Risk rating if Zone of Sensitivity Present <sup>2</sup>
	Very High	High	Moderate	Low / Very low	
Marina Large = >20 slips	VH	VH	VH	VH	NA
<b>Water Withdrawal, Use or Discharge</b>					
Waterline - directional drilling	M	M	M	M	NA
Waterline - open excavation	VH	VH	H	M	NA
Geothermal heating/cooling - commercial, industrial, strata or multi-family	VH	VH	VH	H	NA
Geothermal heating/cooling - single family residence	H	H	M	L	NA
Treated effluent discharge pipe	VH	VH	VH	VH	NA
Commercial water withdrawals (addressed through water licensing, with physical activities addressed elsewhere in this table)	-	-	-	-	-
<b>Transition to Private Land from Crown Land</b>					
Application to purchase or lease crown land (crown grant)	VH	H	M	L	NA
<b>Land development, on private land - above NB</b>					
Native vegetation modification/removal, including for: buildings (e.g., boathouses, covered boat storage, permanent non-moorage structures), beach creation, landscaping, and septic fields.	VH	VH	VH	H	NA
Non-native vegetation modification / removal, including for: buildings (see above), landscaping, beach creation, and septic fields.	VH	H	M	L	NA
Drilling and blasting	VH	VH	VH	H	NA

**Legend:**

<sup>1</sup>NB refers to present natural boundary. NB is the legal term BC Crown Land Branch uses to define the property boundary. Often NB and High Water Mark (HWM) are similar. Only a registered BC Legal Land Surveyor may determine NB.

<sup>2</sup>For all activities, if species or Critical Habitat listed under the Species at Risk Act are present, refer to DFO Projects Near Water Website for next steps (<https://www.dfo-mpo.gc.ca/pnw-ppe/index-eng.html>).

<sup>3</sup>Refer to DFO Land Development Guidelines ([http://stewardshipcentrebc.ca/PDF\\_docs/StewardshipSeries/LandDevelopmentGuidelines.pdf](http://stewardshipcentrebc.ca/PDF_docs/StewardshipSeries/LandDevelopmentGuidelines.pdf))

## Appendix C. Legal Requirements and Policy

The following provides a brief summary of environment related legislation that may be applicable to a proponent's project. While this list is fairly inclusive, other pieces of legislation may be applicable, and proponents are to ensure that they have identified all legislation that may apply to their project. The Federal Project Near Water website may be updated to reflect the integration of permitting under the *Species at Risk Act* and *Fisheries Act*. It is the proponents' responsibility to refer to the Projects Near Water website for any updates.

### Federal Acts:

- *The Department of Environment Act*
- *Fisheries Act*
- *Species at Risk Act (SARA)*
- *Migratory Birds Convention Act*
- *Canada Wildlife Act*
- *Navigable Waters Protection Act*
- *Pesticides Act*
- *Canadian Environmental Assessment Act (CEAA)*
- *Indian Act*

### Federal Regulations:

- *Canada Environmental Protection Act Regulations*
- *Migratory Birds Regulations*
- *Fisheries Act Regulations*
- *Wildlife Area Regulations*

### Provincial Acts:

- *Water Sustainability Act*
- *Fish Protection Act*
- *Wildlife Act*
- *Land Act*
- *Weed Control Act*
- *Environmental Management Act*
- (Contaminated Sites Regulations)
- *Local Government Act*
- *Heritage Conservation Act*
- *Health Act (e.g., Sewerage System Regulation)*

### Local Government:

- Development Permit Areas (DPAs)
- Subdivision Servicing Bylaw
- Official Community Plans
- Floodplain Management Bylaw
- Building Bylaw
- Zoning Bylaws

The Legal Requirements table, provided below (Table C1) identifies the main fish and wildlife habitat regulatory requirements for typical foreshore activities. These requirements involve three regulatory processes:

1. Obtaining a BC Crown Land tenure - to request permission for use of provincial Crown land.

2. Obtaining a BC Water Sustainability Act Section 11 notification or approval for making changes in and about a stream.
3. Obtaining necessary DFO acceptance through a Project Review. DFO staff will review the project plans to identify the potential risks of the project to the conservation and protection of fish and fish habitat. During the review, it will be determined if the project will: a) impact an aquatic species at risk, result in the death of fish and the harmful alteration, disruption or destruction of fish habitat, or need authorization under the *Fisheries Act*.

Although potential regulatory requirements (e.g., permits) are listed, the requirements at the time of planning the project should be confirmed, as regulatory changes do occur. FrontCounterBC should be contacted to confirm these requirements.

The Legal Requirements table only provides direction related to protecting fish and wildlife habitat values, and as such, does not consider other development factors (such as erosion hazards, drinking water quality, or navigation considerations). Proposed works may be subject to requirements such as: local government zoning or permitting, BC *Water Sustainability Act* approvals or notifications (in addition to those noted above) and Water License applications, Heritage Conservation Act permits, Land Act permits, licenses or permissions for occupation of Crown Lands, or Navigable Waters Protection Act approvals. It remains the responsibility of the project proponent to verify this information and meet all regulatory requirements that may apply to their project.

**Table C1. Summary of typical legal environmental requirements for select development activities.**

Activity <sup>1</sup>	Crown Land Tenure	BC Water Sustainability Act-Section 11 <sup>2</sup>	Federal Fisheries Act Review <sup>4</sup>	Other
<b>Aquatic Vegetation Removal</b>				
Removing native aquatic vegetation - by hand, or mechanical cutting for swimming areas and private beach access	N	Y	See DFO website	-
Removing non-native/invasive aquatic vegetation - by hand or mechanical cutting for swimming areas and private beach access	N	Y	See DFO website	-
<b>Dredging, Infilling and Beach Creation</b>				
Dredging - new or expansion works, no current tenure	Y	Y	Y	-
Maintenance dredging - dredged in last 10 years, no increase in footprint below the NB, dredged material deposited on land, within existing tenure.	N	Y	See DFO website, likely N	-
Lake infilling - e.g., extension of upland landscaping	Y	Y	Y	-
Beach creation below the lake NB	Y <sup>3</sup>	Y	Y	-
Beach creation above the lake NB, assumes on the applicant's land	N	Y	See DFO website, likely N	See DFO Land Development Guidelines <sup>5</sup>
Foreshore sediment disturbance and removal of lakebed substrate (e.g., beach grooming)	N	Y	See DFO website, likely Y	-
<b>Foreshore Erosion, Sediment or Wave Control Structures</b>				-
New groyne construction or increase in existing footprint	Y	Y	Y	-
Maintenance of existing groyne, no increase in existing footprint, within existing tenure	N	Y	N	-
Erosion control (e.g., concrete, rip rap, vegetation, etc.)	N	Y	See DFO website	-
Infill breakwaters or boat basins	Y	Y	See DFO website	-
Wave control structures (e.g., log booms)	Y	Y	See DFO website	-
<b>Boat Launches</b>				-
Construction of new hard surface boat launch or repair/upgrade of existing hard surface boat launch without land tenure	Y	Y	See DFO website	-
Upgrade/repair of existing hard surface boat launch, within land tenure, and within existing footprint	N	Y	N	-

Activity <sup>1</sup>	Crown Land Tenure	BC Water Sustainability Act-Section 11 <sup>2</sup>	Federal Fisheries Act Review <sup>4</sup>	Other
Upgrade/repair of existing hard surface boat launch, within land tenure, and increasing size of the existing allowable footprint	Y	Y	Y	-
Construction of new boat rail launch or repair/upgrade of existing boat rail launch without land tenure	Y	Y	See DFO website	-
Upgrade/repair of existing boat rail launch with land tenure and within existing footprint	N	Y	N	-
<b>Buoys</b>				
Placement of up to 2 helical screw anchor mooring buoys for non-commercial use.	Y <sup>3</sup>	Y	N	Federal Navigable Waters Act
Placement of up to 2 non-helical screw mooring buoys for non-commercial use.	Y <sup>3</sup>	Y	N	Federal Navigable Waters Act
Placement mooring buoys for commercial use	Y	Y	N	-
<b>Docks, boathouses, pile supported structures, float home structures, and other - below NB</b>				
Docks - floating, pile supported or removable	Y <sup>3</sup>	Y	See DFO website	-
Floating or lake access boat house, covered boat storage, or permanent non-moorage structures	Y	Y	Y	-
Land boat house - located on land with access directly to the water.	Y	Y	See DFO website	-
Pumphouse	Y	Y	Y	-
Boat lifts	Y <sup>3</sup>	Y	See DFO website	-
Float homes and house boats - refers to long term storage area.	Y	Y	Y	-
Float home/ house boats - refers to short term mooring (in bays).	Y	Y	See DFO website	-
Submarine cables, including related land clearing and equipment access.	N	Y	See DFO website	-
Submarine cables - no land clearing necessary.	N	Y	N	-
Overwater piled structure (e.g. building, deck, etc.)	Y	Y	See DFO website	-
Elevated boardwalk over water	Y	Y	See DFO website	-
<b>Marinas</b>				
Private dock moorage = < 6	Y <sup>3</sup>	Y	See DFO website, likely Y	-
Small Marina = 6 – 20 slips	Y	Y	Y	-
Marina Large = >20 slips	Y	Y	Y	-

Activity <sup>1</sup>	Crown Land Tenure	BC Water Sustainability Act-Section 11 <sup>2</sup>	Federal Fisheries Act Review <sup>4</sup>	Other
<b>Water Withdrawal, Use or Discharge</b>				
Waterline - directional drilling	N	Y	See DFO website	May require a Water License
Waterline - open excavation	N	Y	See DFO website	May require a Water License
Geothermal heating/cooling - commercial, industrial, strata or multi-family	Y <sup>3</sup>	Y	See DFO website	May require a Water License
Geothermal heating/cooling - single family residence	Y <sup>3</sup>	Y	See DFO website	May require Water License
Treated effluent discharge pipe	Y <sup>3</sup>	Y	N	Environment Canada
Commercial water withdrawals	Y <sup>3</sup>	Y	See DFO website	Requires Water License
<b>Transition to Private Land from Crown Land</b>				-
Application to purchase or lease crown land (crown grant)	Y	N	N	-
<b>Land development, on private land - above NB</b>				
Native Vegetation modification / removal	N	Y <sup>3</sup>	See DFO website	-
Non-native Vegetation modification / removal	N	Y <sup>3</sup>	See DFO website	-
Drilling and blasting	N	Y	See DFO website	If < 30 m NB, contact local government
Boathouses / covered boat storage / permanent non-moorage structures	N	Y <sup>3</sup>	See DFO website	Refer to Local Government
Building and development permit application	N	Y <sup>3</sup>	Y <sup>3</sup>	Refer to Local Government
Landscaping with Native Vegetation	N	N	See DFO website	Refer to Local Government
Landscaping with Non-native Vegetation	N	N	See DFO website	Refer to Local Government
Septic application	Y <sup>3</sup>	N	N	Refer to Health Authority

**Legend:**

<sup>1</sup>NB refers to present natural boundary. NB is the legal term BC Crown Land Branch uses to define the property boundary. Often NB and High Water Mark (HWM) are similar. Only a registered BC Legal Land Surveyor may determine NB.

<sup>2</sup>BC Water Sustainability Act Approval or Notification.

<sup>3</sup>Although indicated as Yes, the requirement is structure/location dependent. Refer to FrontCounterBC.

<sup>4</sup>DFO Projects Near Water Website (<https://www.dfo-mpo.gc.ca/pnw-ppe/index-eng.html>). For all activities, if species or Critical Habitat listed under the Species at Risk Act are present, refer to this website.

<sup>5</sup>Refer to DFO Land Development Guidelines

([http://stewardshipcentrebc.ca/PDF\\_docs/StewardshipSeries/LandDevelopmentGuidelines.pdf](http://stewardshipcentrebc.ca/PDF_docs/StewardshipSeries/LandDevelopmentGuidelines.pdf)).

## Appendix D. Best Management Practices

The BC Ministry of Environment (MOE 2019) defines best management practices (BMPs) as “guidelines that help development projects meet necessary legislation, regulations and policies. For example, legislation might dictate that projects cannot harm a stream, while best management practices provide practical methods to avoid harming a stream.”

The table below provides a summary of potentially applicable environmental and archaeological BMPs. This list is not exhaustive, other applicable BMPs may be available for a given project, and updates occur regularly. Thus, it is recommended that the website be accessed at the following link for a current updated list: <https://www2.gov.bc.ca/gov/content/environment/natural-resource-stewardship/laws-policies-standards-guidance/best-management-practices>.

FrontCounterBC or a QEP should be contacted for more information on recent Provincial BMP's that may be specifically applicable to the Project. For Federal documents, the *Projects Near Water* website by Fisheries and Oceans Canada should also be referred to (<https://www.dfo-mpo.gc.ca/pnw-ppe/index-eng.html> ).
